PROFILE

BS Artificial Intelligence student at the University of Management & Technology with hands-on experience across AI automation, full-stack development, computer vision, and responsible AI systems. Builds practical, human-in-the-loop applications using Python, FastAPI, React, n8n, LLM APIs, and YOLO, with public projects spanning autonomous personal assistants, fair resume screening, developer-workspace automation, and smart parking analysis.

EDUCATION

University of Management & Technology (UMT) <i>Bachelor of Science in Artificial Intelligence (3.36 CGPA, 7th Semester)</i>	Oct 2023 - Present
Divisional Public School <i>Intermediate 74%</i>	2021 - 2023
Faisalabad Cadet School <i>Matriculation 85%</i>	2018 - 2020

EXPERIENCE

- AI Automation Intern - Software House** 3 Months
- Developed and deployed n8n automation workflows for real-world business processes, connecting APIs, AI services, webhooks, and data-transformation steps.
 - Worked with the development team to identify repetitive workflows and convert them into maintainable automated pipelines.
- Freelance Web Developer**
- Built responsive web applications with front-end interfaces and back-end functionality tailored to client requirements.
 - Worked across HTML, CSS, JavaScript/React, Python, PHP, databases, SEO, and WordPress while collaborating directly with clients.

PROJECTS

- ChiefMind - AI Personal Employee** github.com/Sobanshahid10/ai-personal-employee
Python | Flask | Gmail API | Groq | Playwright | MCP-style tooling
- Built a local-first, human-in-the-loop assistant that watches Gmail, converts messages into structured work, drafts grounded replies, and pauses before external actions for approval.
 - Added exact-action execution, duplicate/rate protection, audit receipts, a private dashboard, job discovery, and supervised launchd/systemd operation.
- ClarityHire** github.com/Sobanshahid10/AI-Resume-Screening-Bias-Detection
FastAPI | Celery | React | Fairlearn | Sentence Transformers | Redis
- Built a human-in-the-loop resume screening platform with PII anonymization, hybrid semantic/feature scoring, live agent traces, and explainable candidate ranking.
 - Implemented synthetic demographic fairness audits, asynchronous processing, SQL persistence, and PDF/HTML/CSV reporting without using protected attributes for scoring.
- OS Pilot Agent** github.com/Sobanshahid10/ospilot-agent
Python | FastAPI | React/Tauri | Multi-Agent Architecture | Restricted Tools
- Developed a local-first multi-agent system that diagnoses developer workspace pressure and identifies rebuildable project artifacts for safe storage recovery.
 - Designed approval-gated quarantine, protected-path checks, restore history, audit evidence, and project-aware rebuildability scoring instead of destructive cleanup.
- Smart Parking Detection** github.com/Sobanshahid10/smart-parking-detection
Python | YOLOv8 | OpenCV | Gradio | DBSCAN | Hugging Face
- Built image/video parking analysis that detects occupied and vacant spaces, overlays zone availability, and ranks the best open spots using entrance distance and clustering signals.
 - Added adjustable detection modes and a contextual parking chatbot with Hugging Face API support and a rule-based fallback.

TECHNICAL SKILLS

AI & ML: Machine Learning | Computer Vision | YOLOv8 | OpenCV | NLP/LLM Integration | Responsible AI | Fairness Auditing
Languages & Frameworks: Python | C++ | Java | PHP | HTML/CSS/JavaScript | React.js | FastAPI | Flask | Django | Spring
Automation & APIs: n8n | REST APIs | Webhooks | Gmail API | Groq/LLM APIs | MCP-style tool integration
Data & Tools: MySQL | MongoDB | Redis | Git/GitHub | Docker | Gradio | WordPress | SEO

ADDITIONAL

Languages: Urdu | English
Certifications: SEO & WordPress - 3 Months Training | AI Automation (n8n) - 3 Months Internship
Interests: Artificial Intelligence | Machine Learning | Agentic AI | Web Development | Automation
